Deliverable

Lab:

- Liberty Systems Cybersecurity Case

Deliverable

A 1-page memo with a screenshot of your final Alteryx workflow.

The memo should answer the following (based on Q7 and Q8 of the case):

1. Based on your analysis, what do you believe should be the next steps for the external audit?
2. What other concerns do you have from reviewing the data? List at least three concerns you have and explain why you are concerned.

Deliverable

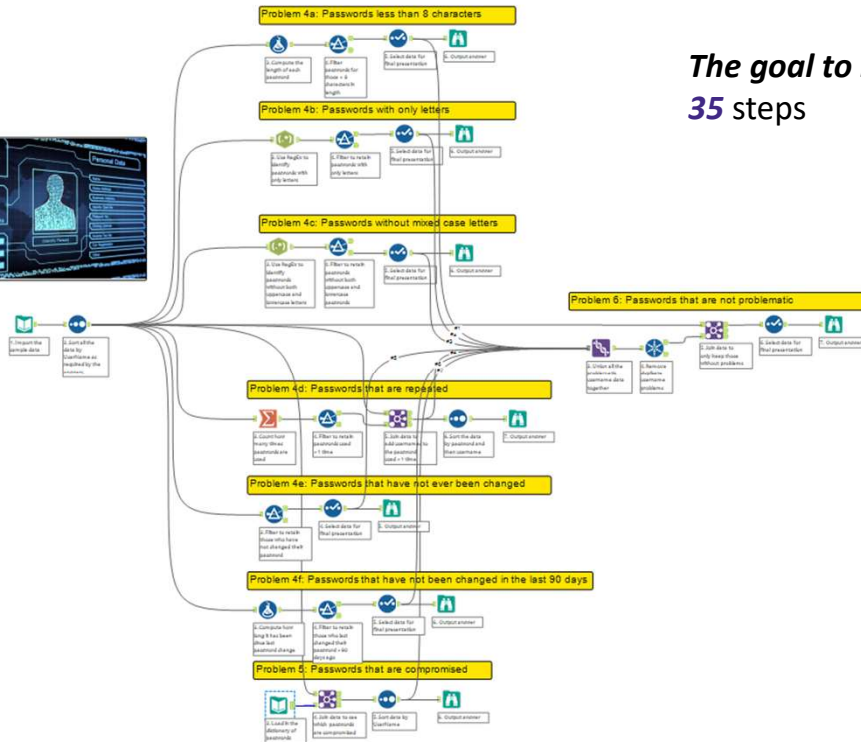

Lab:

- Liberty Systems Cybersecurity Case

Today's Challenge

Fewer steps makes a workflow easier to follow and debug, making it easier to share.

The Challenge: Do better than the following screenshot by using **fewer tools**.

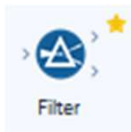

The goal to beat:
35 steps

Tool Suggestions

Formula tool can accommodate many expressions, including RegEx, and output data in many formats (e.g., Boolean).

Filter tool can accommodate many custom conditions using **AND**, with Boolean = 1 = True.

RegEx Help

RegEx that *matches* the following plain English:

- Only lowercase letters:
 - “[a-z]*”
- Upper and lowercase letters:
 - “.*[a-z].*[A-Z].* | .*[A-Z].*[a-z].*”
- The “|” pipe delimiter is an “OR” operator.

Final Hints

Combine steps into Formula and filter tools, use boolean (or False=0/True=1) to simplify the filter conditions.

Final output is Passwords that are NOT problematic, you will find (only) **6** meet the criteria.

Thank you!
